# INSTALLATION OF DIGITAL CONTROLS

## FUNCTIONAL ELEMENTS

## AESTHETIC ELEMENTS

### INSTALLATION

With reference to the illustration, digital devices are installed in their respective flush mounted box and support, item K470..., using an appropriate "frame" with 27 Vd.c. control device power supply contacts.  
The Module for connection to the system BUS and any flush mounted actuators are installed on the support.

# ALWAYS PERFECT INSTALLATION

## FUNCTIONAL ELEMENTS

### STANDARD INSTALLATION

Both in case of **traditional** and **connected devices**, installation is always standard, with the following characteristics:

- traditional wiring;
- flush mounted or plasterboard boxes, typically 2 to 6 modules;;
- no configuration required.

### YOUR WORK DOES NOT CHANGE, BUT IS MADE EASIER

The rules and procedures for the installation of the electric system don't change. Moreover, with the installation of the aesthetic components at the end of the works, you will hand to your customer a perfect and perfectly looking system.

## AESTHETIC ELEMENTS

### SITE ACTIVITY SEQUENCE

- Install the system, fully working, but without aesthetic elements (cover plates and covers)
- Protect the light point using the protective shell (supplied with the support))
- After completing all the works (including the painting of the walls), install the cover plates and the covers

### MORE ADVANTAGES

- When repainting the walls in the future, the customer will be able to easily remove the light point aesthetic components, cover plates and covers, and just as easily replace them on completion of the works
- After a few years the customer decides to change light points?  
It is possible to simply change the covers, without touching the mechanisms

# SOLUTIONS FOR AN ALWAYS PERFECT INSTALLATION

## FULL TOUCH CONTROL: ERGONOMICS

All the surface is functional. It can be precisely activated from the top, bottom or centre, ensuring exceptional ergonomics.

## FULL TOUCH CONTROL: ELECTRO MECHANICS

1) tested with over 80,000 activations with the load connected; double than the standard requirements. This equals over 40 years of "normal" use.  
2) 10AX 250 V or 15AX 127 V, tested up to 700 A peak; also perfect for the new LED light bulbs, which generate significant peak current when switched on.

## SELF CENTERING SYSTEM

This patented cover self-centering system ensures that the control covers are always aligned with the other components of the light point, even after extended use.

## FLOATING FRAME

It's the flexible floating frame at the back of the cover plate that makes sure that the light point perfectly adheres to any wall.

The floating frame gives the possibility of:  
1) hiding wall defects;  
2) hiding any irregularity in flush mounted boxes their positioning;  
3) hiding the external collars of plasterboard boxes.

## STRONGER SUPPORT

Up to 4 times stronger than the current version, thanks to the new geometry and high performance materials.

## BETTER PROTECTION

The support has a protective shell, which can be used to protect supports and mechanisms from possible damage during decorating activities, for example when painting the walls.

EXAMPLES OF LED CONNECTION ON A SWITCH

Function: locating

Function: load status LED

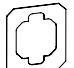

Control backlighting led connection

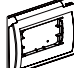

Note for the connection of 230 V.a.c. LEDs for the backlighting of control devices: when LEDs are fitted to help locate the control itself, it must be taken into account that energy saving and fluorescent lamps do not allow in series connection of the LED on the load. It is therefore necessary to also take a neutral conductor near the control, so that the LED may be connected directly between phase and neutral, and will always be on.

K4672M2S	-	-	-	-	-	-	2 A 250 Va.c.

**Notes:**  
1) Power factor corrected fluorescent lamps, discharge lamps.  
2) Account must be taken of the transformer yield to calculate the effective power of the load connected to the actuator. For example if a dimmer is connected to a 100 VA ferromagnetic transformer with yield 0.8, the effective power of the load will be 125 VA.  
3) The transformer must be loaded at its rated power and however never less than 90% of this power. It is preferable to use a single transformer rather than several transformers in parallel. For example it is better to use a single 250 VA transformer with 5 50W spotlights connected rather than use 5 50 VA transformers in parallel each with a 50 W spotlight.  
4) The  symbol on the actuators refers to the shutter reducer motors.

1) 具有正确功率因数的荧光灯，节能灯，放电灯。  
2) 为了计算执行器负载的有效功率，必需考虑变压器的效率。例如，如果你将一盏100VA的灯接到调光执行器，采用的是效率只有0.8的铁磁变压器调光器，那实际的负载功率会是125VA。  
3) 变压器必须加载在其额定功率，在任何的情况下，永远不要低于功率的90%。推荐只使用一个变压器，而不是使用几个并联的变压器。  
4)  该图标表示控制窗帘电机的执行器。

#### LIGHT POINT INSTALLATION

#### REMOVING MOBILE COVERS

⚠ Mobile covers are those that move in relation to the light point, to allow the activation of a control (traditional, connected or MyHOME\_Up)

#### REMOVING FIXED COVERS

⚠ Fixed covers those are attached to the cover plates, such as for example blanking modules and all non-control devices (e.g. sockets, RJ connectors, TV sockets, USB chargers, etc.)
